Blockchain Basics – Coursera

PROJECTS

Tweeter clone (Flutter) - 2025

This project is a Twitter Clone App built using Flutter and Firebase. It allows users to sign up, log in, create tweets, view other users' posts, and follow or unfollow people in real time. The app includes features like user profiles, media uploads, and a personalized feed that shows tweets from followed users. Firebase Authentication manages user sessions, while Cloud Firestore stores tweets, profiles, and followers data.

Blog Platform Mean Stack (MongoDB, Express.js, Angular, Node.js) - 2025

Designed and implemented a dynamic blogging application with user login and role-based access. The system supports creating, editing, and deleting blog posts with real-time updates. Admins can moderate content, while the responsive Angular frontend ensures an engaging user experience across devices.

Brain Stroke Analysis Using Machine Learning (Python) - 2025

To predict the likelihood of brain stroke occurrences using patient health records, aiming to support early detection and prevention using advanced machine learning and deep learning algorithms.

Voice Assistant (Android, Kotlin) - 2024

This Android Kotlin project is a simple voice assistant that listens to your voice commands and responds. It can recognize speech, convert it to text, tell the current time, show the weather, and perform tasks like Google Assistant.

Movie Ticket Booking System Mern Stack (MongoDB, Express.js, React.js, Node.js) - 2024

Developed a full-stack web application for online movie ticket booking. The platform includes features such as user authentication, movie listing, showtime scheduling, and interactive seat selection. The admin panel allows management of movies, showtimes, and booking records for streamlined operations.
